ARIA
AUTOMATED RETAIL INSIGHTS ASSISTANT

Setting up a new client

A new client takes about 30 minutes. No new SQL work is needed if the client already exists in SQL and sells only in PnP, SPAR, Builders, Game, Makro or Shoprite Checkers.

YOUR ARIA ADMIN DOES
Step 1: create the client

THE KAM DOES
Steps 2 to 5: data, users, mapping, checks

Before you start

Get these together first. Step 1 can't be finished without them.

What	Example	Where to get it
Client name as it appears in SQL	HENKEL	It shows in the SQL Server Client list in Step 1. Not there? Ask your ARIA admin to have it added first.
Display name for the portal	Henkel	The client
Web address	henkel.ariascorecard.co.za	Agree with your ARIA admin
Brand colours as HEX codes	#E1000F	The client's brand guide or website
Logo	PNG file	The client
Who will be the client admin	Usually you, the KAM	
KPI weightings (must add up to 100)	Defaults are fine to start	The client
The KAMs, and the chains and brands each one looks after	Thandi: PnP and SPAR, all brands	Your manager

1 Create the client

ARIA admin

Only an ARIA admin can create a client, because this step decides whose data the portal can see. **KAM:** send your ARIA admin everything from the table above.

1. Sign in to the ARIA admin area.
2. Click **New Client**.
3. Under **Client Details**:
   - Type the **Client Name**. The **Slug** fills itself in.
   - In **Custom Domains**, type the web address.

- In **SQL Server Client**, pick the client. This one field links the portal to its data. Never leave it on "No SQL mapping".

4. Under **Branding**, enter the **Primary Colour**, the other colours if they have them, then **Choose File** for the logo.
5. Under **Modules**, untick anything the client hasn't paid for.
6. Under **KPI Weightings**, move the sliders until the total says **100 / 100** in green.
7. Under **Initial Admin User**, enter the KAM's name, email and a temporary password. Leave both boxes ticked.
8. Click **Create Client**.
9. Your ARIA admin switches on the web address. The portal won't open at its address until this is done.

The KAM gets a welcome email with their login.

2 Load the data

KAM

No data shows until the first sync has run. You never pick SQL queries: the portal runs the same ones for every client, filtered by the client name chosen in Step 1.

1. Open the welcome email, sign in at the client's web address and set your own password.
2. In the left menu, click **Control Centre**.
3. Click **Sync All** and **wait for it to finish**. Sales alone can take about 2 minutes. Don't close the tab.
4. Read the result under the buttons. Each part shows how many rows it pulled. If a part failed, send that line to your ARIA admin.
5. Optional, for last year's sales: under **What to sync**, tick **Full months (LY) backfill**, then click **Sync Now**. Each run pulls 2 months. When it says "run again to continue", click **Sync Now** again.
6. Set the auto-sync: under **Add a time**, pick an hour (SA time) and click **+ Add**. Add as many as you want, then click **Save Schedule**.

> With no times saved, the data only updates when someone clicks Sync Now.

3 Add the users

KAM

Give every KAM the **KAM** role. Only KAM users can be picked in Step 4.

1. In the left menu, click **Admin**, then **+ New User**.
2. Fill in **Name**, **Email**, a temporary **Password** and the **Role**.
3. Leave **Send welcome email with credentials** ticked and click **Create User**.

Role	Who gets it	What they can do
Admin	The KAM who runs this client	Everything in this guide
KAM	Each KAM	Their own scorecard and the KPI pages
Manager	Client managers	View scorecards and KPI pages
Rep	Field reps	View only what their role allows

> The Admin login isn't a KAM, so it can't have its own KAM scorecard. If the KAM running the client also needs one, add them again with the KAM role, using a different email address.

4 KAM Mapping

KAM

This tells the portal which chains and brands belong to each KAM. It drives the KAM scorecard and the KAM filter on every page. Do it after Step 2: the chain and brand lists come from the first sync.

1. In the left menu, click **KAM Mapping**, then **+ Add Mapping**.
2. In **KAM**, pick the KAM.
3. Tick their **Channels** (chains) and **Brands**, then click **Save Mapping**.
4. Repeat for each KAM.

5 Check it worked

KAM

Open **Sales**, **Out of Stocks**, **Numerical Distribution** and **Phantom Stock**. Each should show rows for the client. Then open a scorecard and pick a KAM from the filter.

What you see	Why	What to do
Every page is empty	No sync has run, or the client isn't linked to SQL	Run Sync All. Still empty: ask your ARIA admin to check the client link.
One chain is missing	The client doesn't sell there, or there is no data for it yet	Check the Sync All result for that chain. Send the error to your ARIA admin.
Phantom is empty for one chain	The portal can't read that chain's phantom data yet	Ask your ARIA admin.
Client sells in a chain we don't have (e.g. Clicks)	That chain isn't in the portal yet	Ask your ARIA admin. The chain has to be added first.
Scorecard doesn't list older months	Scorecard months start at the first sync. Stock snapshots can't be rebuilt for the past.	Nothing to do. Older sales months are on the Sales page after the backfill.
"Your session expired"	Signed in for more than 24 hours	Sign in again and redo the last step.
"Too many requests"	Too many sign-in attempts in a minute	Wait 1 minute and try again.
